

The diagram shows a triangular prism with base length $3l$ and height l . A light ray enters from the left, passes through the prism, and exits to the right. The angle of incidence is α , the angle of refraction is β , and the angle of emergence is γ . The angle of deviation is ϕ_1 . The angle of refraction at the second surface is ϕ_2 . The length of the prism is l . The base is labeled $3l$. The diagram is labeled "plumb line" at the top left.
